

Make your next deck easier.

Upload a deck you like. Save its design. Test it on fresh content.

Copy this prompt into Claude with your reference deck.

Use the attached presentation as a design reference, not as a source of facts for a new deck.

- 01 Inspect the slide layouts, typography, colours, spacing, alignment, images, charts and footers. Tell me what you can verify and what you are estimating.
- 02 Create a reusable DESIGN.md. Explain the layout choices and what to do when content does not fit. Ask me about conflicting styles or missing fonts.
- 03 Ask for fresh content. Make three editable test slides using different layouts from the reference. Do not reuse its customer names, figures or claims.
- 04 Render and inspect the slides. Ask what I want changed. Save reusable corrections in DESIGN.md; keep one-off edits separate.
- 05 Once I approve the samples, package a personal slide-making skill with SKILL.md, DESIGN.md and only the assets I agree to include. Give me the ZIP, the design file and the editable test deck.

Work on copies. Do not include confidential content or hidden speaker notes in the skill. If you cannot inspect or create the files, say so. Ask one question at a time when needed.

Keep: DESIGN.md + three checked slides + your personal skill.

[Download the slide-making helper skill](#)

Use only files you may upload. Enable code execution and file creation in Claude.
